Our Newsletter, 350PPM (parts per million concentration of carbon dioxide in the Earth's atmosphere) seeks to educate the public about the impending crisis of global warming and climate change. We must reduce greenhouse gas emissions and return the levels of CO₂ in the atmosphere to no more than 350 parts per million. It is only at these levels or below that the climate and environmental systems of the earth as we know them can be maintained. As a point of reference it was 1988 when the earth's atmosphere contained 350 PPM of CO₂.
