2013 was the UN International Year for Water Cooperation

Without the UNITED NATIONS our planet would be much more parched than it is now by the old, hopeless nationalisms. Thanks to the UN, nations cooperate in innumerable ways. But ruinous nationalisms remain. One cause is ignorance. Have you noticed how often reference to UN programs lacks reference to the UN? It’s not World Water Day. It is UN World Water Day. The UN created it as a day to recommit to preserving the world’s water and to recharge our energy for the work ahead. Recently an acquaintance sneered at the UN. I asked him what he knew about UN initiatives and ongoing agencies, and as I expected he knew almost nothing. His contempt derived from the few failed UN (military) Peacekeeping actions. He did not know that most of the Peacekeeping efforts have been successful. The nations ended WWII determined to create a world of cooperating, mutually supporting, friendly nations rather than nations that brought on WWI and WWII. And the UN was born. Unfortunately, the two militarily strongest nations continued the old nationalisms, building armies and weapons, threatening, frightening, and killing the people of the world, draining resources away from human needs, and undermining the UN. Repeatedly each country, instead of putting its power and resources into a united world, pursued its own paranoid, dominance goal. But the dream of the UNITED NATIONS has not disappeared; nothing has been suggested better except improvements in the UN itself. But national rivalries and public ignorance can undermine the dream. On this day and during this year, let us join the UN in finding ways to provide safe water for all the people on earth. We know where to begin. The trillions of dollars wasted on our many illegal and unnecessary interventions, invasions, and occupations would have been enough to achieve that dream. That money is gone. But we as individuals can resolve in the future to spend our money and time for water rather than war through the United Nations.

**OMNI NEEDS A WATER ANALYST AND ADVOCATE**

Four years ago (7-29-10) Amy Goodman and Laura Flanders interviewed Maud Barlow on the worsening, unjust water conditions of the world— the day before the UN GA voted overwhelmingly to declare water and sanitation as fundamental rights.

OMNI needs a water rights and compassion voice. The UN resolution gives us a powerful impetus to have at least one person reminding us, NWA, and Arkansas about the global problems with water and warning us about its privatization and commodification and now the dire threat of warming/climate change.

But if another of the UN’s goals interests you more, go for that. Joining OMNI is an option, for its goals of peace, justice, and ecology are the UN’s goals. Just don’t be passive and silent.
