UNITED NATIONS WORLD POPULATION DAY
NEWSLETTER #3, JULY 11, 2015

https://jamesrichardbennett.blogspot.com/2019/08/omni-un-world-population-day-newsletter.html

Compiled by Dick Bennett for a Culture of Peace, Justice, and Ecology
(#1 July 11, 2013; #2 July 11, 2014)

What’s at stake: Stopping and reversing population growth and, in wealthy countries, consumption before the human civilization is destroyed by all the consequences of rising CO2 and temperature.

   World Population day was established in 1989 by the UNDP, which stands for the United Nations Development Programme. World Population Day was inspired ...
Now, every July 11 is celebrated as World Population Day, to highlight the importance of addressing the needs of vulnerable populations in emergencies. The United Nations Population Fund (UNFPA) partners with governments and organizations to promote gender equality and end discrimination against women.

According to the United Nations, world population reached 7 Billion on October 12, 1999 (celebrated as the Day of 6 Billion).

Latest No. of Population Connection (June 2015). (--Dick)

If you are associated with a college campus and you want to help stop population growth, contact Lee Polansky at lee@popconnect.org or call (202) 974-7702 for a free presenter from PC.

President’s Note: “According to the UN medium-fertility projection, world population will increase by 3.5 billion by 2100. The poorest, most rapidly growing nations will make up 100 percent of the global net increase. As their rising fossil fuel emissions approach even a modest fraction of ours, the impact will be catastrophic. We cannot save the planet by dooming millions to permanent poverty. Instead, we must invest in…voluntary contraception and smaller families.”

Contraception in the News (6 reports)
First report: “All Birth Control Methods Required to Be Covered without Copay Under Affordable Care Act”

Emphasis on WATER

Editor’s Note: “As California’s population grows, its per capita water availability shrinks. As the world populations grow, more people depend on California’s agricultural products. A combination of more efficient irrigation techniques and global population stabilization is the only long-term solution for the future….”

“Feeding a planet with nine billion residents will require at least fifty percent more water in 2050 than we use today….water wars are on the horizon.”

Matt Weiser and Phillip Reese, “[California] State’s Population Growth Expected to Outstrip Water Conservation in Coming Years.”

Adam Nagourney, et al. “California Drought Tests History of Endless Growth.” Orig. pub. NYT (April 4, 2015). “A punishing drought is forcing a reconsideration of whether the aspiration of untrammeled growth that has for so long been the state’s engine has run against the limits of nature.”

DICK’S ANALYSIS OF WEISMAN’S CHAPTER 9, “THE SEA,” COUNTDOWN, about the Philippines

This chapter epitomizes the comprehensive brilliance of the book as a whole, its grasp of the macrocosm in the microcosm, yet it is short. For example, the story of a family planning nurse in Manila expands into an explanation of why stopping population growth is inseparable from stopping or adapting to the rising ocean, and how both arise from Catholic anti-planned parenthood policies. And that is only the beginning.

To make his case interesting he has arranged his stories, histories, and stats in unexpected turns and juxtapositions, small and large, present and past (Weisman opens with a recent typhoon that floods Manila and with a male nurse, Roland, who helps poor women, and he places this now in the then of the Spanish-American War). For simple clarity, I will recast the chapter into rough chronological order (Weisman does not date everything).

1898 The three-year Spanish American War “killing at least a quarter-million Filipinos [out of 7 million] who objected to becoming U.S. colonials” (and the war is compared to the Vietnam War). Despite the slaughter, the population quintupled to 100 million, while rest of planet quadrupled. Why? Because the church in “the most Catholic country in Asia” with its strict prohibitions of contraception, never surrendered during or after the occupation. In two pages: weather, obstructions to family planning, two wars and occupations, religion triumphant leading to egregious population growth and poverty.
Overthrow of dictator Ferdinand Marcos by Cory Aquino, devoted follower of the Church, who became President.

2000? Roland, trained as family planning nurse in Catholic Manila. 

2010- New president Benigno Aquino III, son of Cory, favored reproductive health through affirmative national government (including free contraception, maternity care for the poor). Benigno was thwarted in all efforts to pass bills. As population zoomed, people became the Philippines’ chief export. A nurse makes more in a day in the wealthy ME countries than made in a month back home. Two million Filipinos went to the ME. Roland working in a charitable obstetrics and gynecological clinic in an extremely poor and diseased municipality near Manila where contraceptives were legal. Though the nation had no family planning some municipalities did. There he learned about abortion using mifepristone and misoprostol (expensive) and vacuum aspiration (sure and cheaper). For devout Roland, the needs of the poorest of the poor—750,000 illegal, dangerous abortions in the Philippines--trumped church doctrine (vivid two pages).

That was Section i. Section ii is about family planning around the coasts of the Philippines.

2004- Western countries and foundations help financially. The PATH Foundation came with enough pills for all women who wanted them. An employee: “Population goes up, resources come down.”

2008 Integrated Population and Coastal Resource Management ended. It had helped hold down population that had grown beyond the capacity to feed all. “The country’s richest seas were being devoured, and among the imperiled species was the one doing the devouring” (helped with cyanide and dynamite).

2010 continued. Population growing, fish decreasing. But family planning coming in with pills, condoms, shots, without which the families would have 8 to 11 children. Localities continued after departure of the foundations.
CLIMATE CHANGE AND CONSUMPTION

The Great Unmentionable

Posted: 12 Apr 2013 07:54 AM PDT

By George Monbiot, published on the Guardian’s website, 12th April 2013

Every society has topics it does not discuss. These are the issues which challenge its comfortable assumptions. They are the ones that remind us of mortality, which threaten the continuity we anticipate, which expose our various beliefs as irreconcilable.

Among them are the facts which sink the cosy assertion, that (in David Cameron's words) "there need not be a tension between green and growth."

At a reception in London recently I met an extremely rich woman, who lives, as most people with similar levels of wealth do, in an almost comically unsustainable fashion: jetting between various homes and resorts in one long turbo-charged holiday. When I told her what I did, she responded, "oh I agree, the environment is so important. I'm crazy about recycling." But the real problem, she explained, was "people breeding too much".

I agreed that population is an element of the problem, but argued that consumption is rising much faster and - unlike the growth in the number of people - is showing no signs of levelling off. She found this notion deeply offensive: I mean the notion that human population growth is slowing. When I told her that birth rates are dropping almost everywhere, and that the world is undergoing a slow demographic transition, she disagreed violently: she has seen, on her endless travels, how many children "all those people have".

As so many in her position do, she was using population as a means of disavowing her own impacts. The issue allowed her to transfer responsibility to other people: people at the opposite end of the economic spectrum. It allowed her to pretend that her shopping and flying and endless refurbishments of multiple homes are not a problem. Recycling and population: these are the amulets people clasp in order not to see the clash between protecting the environment and rising consumption. For more: The Great Unmentionable

The President Wants to Hear from Us

From the White House: Write or Call

President Obama is committed to creating the most open and accessible administration in American history. That begins with taking comments and questions from you, the public, through our website.

Call the President

PHONE NUMBERS
Comments: 202-456-1111
Switchboard: 202-456-1414

TTY/TTD
Comments: 202-456-6213
Visitor's Office: 202-456-2121

Write a letter to the President

Here are a few simple things you can do to make sure your message gets to the White House as quickly as possible.

1. If possible, email us! This is the fastest way to get your message to President Obama.

2. If you write a letter, please consider typing it on an 8 1/2 by 11 inch sheet of paper. If you hand-write your letter, please consider using pen and writing as neatly as possible.

3. Please include your return address on your letter as well as your envelope. If you have an email address, please consider including that as well.

4. And finally, be sure to include the full address of the White House to make sure your message gets to us as quickly and directly as possible:

The White House
1600 Pennsylvania Avenue NW
Washington, DC 20500
